- **uname -r** → Shows the **kernel release version** of your operating system.
- **uname -m** → Displays the **machine hardware architecture** (e.g., x86_64).
- **uname -p** → Prints the **processor type**, though often returns "unknown" on Linux.
- **uname -i** → Shows the **hardware platform**, but may also return "unknown".
- **uname -o** → Displays the **name of the operating system** (e.g., GNU/Linux).
- **uname -a** → Outputs **all available system information** in one line.
- **uname -v** → Shows the **kernel version**, including build date and time.
- **uname -n** → Displays the **network node hostname** of the machine.

TASK 2

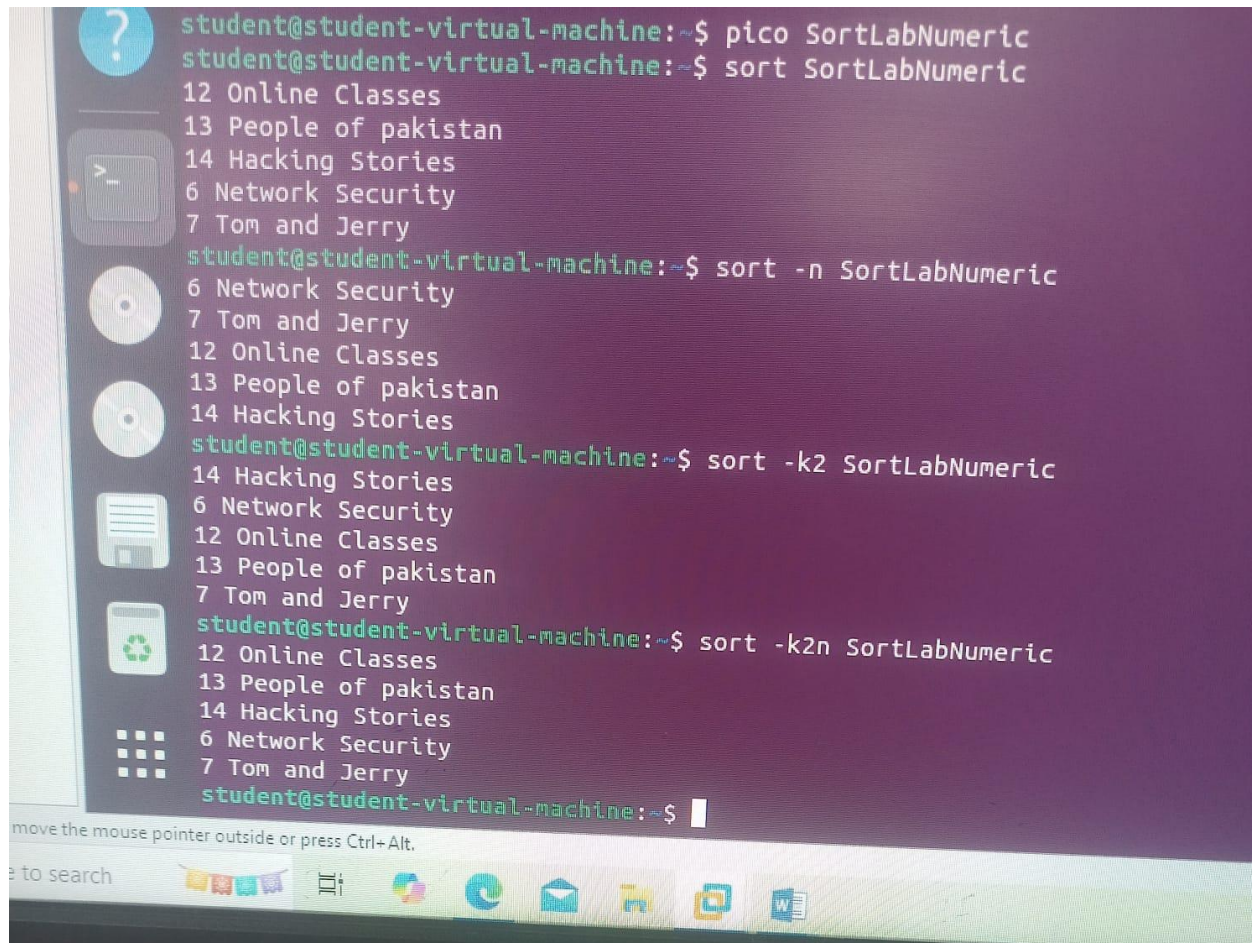

The screenshot shows a terminal window with a purple background. The user is logged in as 'student' on a 'student-virtual-machine'. The terminal displays the following commands and their outputs:

```
